# Double Check T-10<sup>®</sup> Backflow Meter

Today, utilities are faced with cross-connection regulations while challenged to meet rising homeland security initiatives. The Neptune<sup>®</sup> T-10<sup>®</sup> Double Check backflow meter delivers a positive drip-tight seal for protection from the reverse flow of non-potable liquids brought about by a cross-connection breach. The 5/8" T-10 Double Check backflow meter may be used in the following applications:

## Problem

- Fire protection systems
- Residential services
- Plumbing systems
- Other systems requiring low hazard protection

The 5/8" T-10 Double Check backflow meter can be fully upgraded to all Neptune ARB<sup>®</sup> Utility Management Systems<sup>™</sup> components, such as ProRead<sup>™</sup>, ProCoder<sup>™</sup>, E-CODER<sup>®</sup>, E-CODER<sup>®</sup>)R900i<sup>™</sup>, or the E-CODER<sup>®</sup>)R450i<sup>™</sup>. When coupling the E-CODER)R900i or the E-CODER)R450i with the T-10 backflow meter, Neptune is able to offer an innovative solution for utilities that implement a backflow program. The reverse flow detection of the E-CODER)R900i and E-CODER)R450i offers utilities 365 days of 15-minute interval reverse flow monitoring to ensure that the device is functioning properly.

## Construction

The 5/8" T-10 Double Check backflow meter has the same standard laying length (7 1/2 inches) as a regular 5/8" T-10 water meter while including an integral backflow device in the same meter design. The measuring element in the T-10 Double Check backflow meter is the same as our standard T-10 water meter; therefore, this product has the same extended low-flow accuracy that meets or exceeds the latest AWWA C700 standard. In normal flow conditions, the independently operating check valves remain closed until there is a demand for water. Each of the checks is designed to open at approximately one psi pressure differential in the direction of flow. At cessation of flow or under a back pressure condition, both checks will close until normal flow is resumed.

## Approvals

The T-10 Double Check backflow meter is NSF/ANSI 372 certified and approved by the ASSE (American Society for Sanitation Engineering) 1015. It is rated as a 1/2" backflow device.

## KEY FEATURES

- Integral double check backflow device and T-10 meter design
- Lead free copper alloy maincase
- Positive displacement, nutating disc measuring chamber
- Extended low-flow accuracy
- Cartridge check assemblies for ease of serviceability
- Fits standard 5/8" meter lay length
- Ability to upgrade to AMR seamlessly
- Test cocks are vertically oriented for ease of testing in tight areas
- Provides significant labor savings due to reduced installation costs in retrofit applications
- Provides 365-day, 15-minute interval reverse flow monitoring with E-CODER)R900i or E-CODER)R450i register
- Supports cross-connection control measures
- Enhances customer service by providing security protection against cross-connection
- NSF/ANSI 372
- ASSE 1015

## Operating Characteristics

Meter Size	Normal Operating Range @100% Accuracy (±1.5%)	AWWA Standard	Low Flow @ 95% - 101% Accuracy
5/8"	1/2 to 20 US gpm 0.11 to 4.55 m <sup>3</sup> /h	1 to 20 US gpm 0.23 to 4.5 m <sup>3</sup> /h	1/8 US gpm 0.03 m <sup>3</sup> /h

## Systems Compatibility

Adaptability to all present and future systems for flexibility is available only with Neptune's ARB® Utility Management Systems™.

### Maximum Operating Water Pressure

- 175 psi

### Maximum Operating Water Temperature

- T-10 meter accuracy rated to +80°F
- Backflow assembly rated to +110°F

### Register

- Direct reading: synthetic polymer box and cover, bronze box and cover
- Remote reading: ARB V, ProRead, ProCoder, E-CODER, E-CODER)R900i, E-CODER)R450i, TRICON/S, TRICON/E3

### Reverse Flow Protection

- Two stainless steel spring-loaded check valves

### Measuring Chamber

- Positive displacement, nutating T-10 disc

### Bottom Caps

- Synthetic polymer
- Cast iron
- Lead free, high-copper alloy

### Environmental Conditions

- Operating temperature: -22°F to +149°F (-30°C to +65°C)
- Storage temperature: -40°F to +158°F (-40°C to +70°C)
- Operating humidity: 0 to 95% non-condensing

## Warranty

Neptune provides a limited warranty for performance, materials, and workmanship. See warranty statement for details.

## Pressure Loss

(Rate of Flow in Gallons per Minute)

## Accuracy

(Rate of Flow in Gallons per Minute)

These charts show typical meter performance. Individual results may vary.

## Guaranteed Systems Compatibility

All T-10 water meters are guaranteed adaptable to our ARB® V, ProRead, ProCoder, E-CODER, E-CODER)R900i, E-CODER)R450i, TRICON®/S, TRICON/E3®, and Neptune meter reading systems without removing the meter from service.
